

Delivery digital artwork files

To handle your order properly and as quickly as possible you should observe the following guidelines.

Computersystem: Supplied files are being processed on Apple Macintosh computers.

Software: We prefer to receive documents processed in:
Adobe Illustrator CS4
Adobe Indesign CS4

We do not have a PDF workflow. Supplied documents processed in a different programme than mentioned above is only possible after contact with the studio.

Fonts: Because difference can appear in character types which have the same name, we request that you provide all fonts (print and screenfonts), including the ones which have been used in imported files.

Images: The resolution must have a minimum of 300 dpi if the image is placed at 100% in the layout.
Do not use DCS-images.
Do not use RGB colours.

Colours: Use only Pantone C colours, instead of Pantone CV or CVC.

Bleed/trapping: The "bleed" of the artwork must be at least 2mm.
Please provide all documents, where necessary, with 0,1pt trapping.

FTP-server: Via our website: www.vermijskartonnage.nl or via the following link:

<http://www.vermijskartonnage.nl/Contact/FTP.htm>

Log-in and password can be obtained from the studio.

or via e-mail: mdekort@vermijskartonnage.nl

Because by supplying the artwork via e-mail or FTP no colourprint can be made, we gladly see, added to the artwork, a "low resolution pdf" for checking the used text, colours and layout

For more information contact our studio:

Vermijs Kartonnage bv, ask for Martijn de Kort or Henri Smulders.
